Adding and Maintaining Users

Registering a new user

Sending invite email

Registering a new user is done via an invite based method which can be initiated by any Counterpoint Cloud Platform admin user within your company.

Sending the invite can be done by going to the **CP2 Manager** tab in the left-bar navigation pane

From the **CP2Manager** menu, click the **Add User** button at the top

Add User

This will present you with a basic user information form:

User Invite

An email will be sent to the address provided for a user to register with. Once the user clicks the email and completes their registration, they will be able to log in and access the Counterpoint Cloud Platform with the permissions you provide.

Employee Name:

Email Address:

Salesrep Id:

Manager? 

Information on this form is gathered in order to set up just the most basic user information and send out an invite for the user to configure their username and password

Employee Name: The Employee's name as it will appear on reports, etc.

Email Address: The email address which to send the registration invite to.

Salesrep Id: The sales rep ID that this person uses. This should match the sales rep id that is assigned to a customer.

When this is filled in, the user will only see customer listings and sales figures for their assigned customers

Manager: Marking a user as a manager allows them to see sales data for customers of other sales reps

Branch: You will also be given a listing of valid branches. You should assign the user's primary

branch here.

Receiving the invite email

The user should then receive an invite email from the **notifications@counterpoint.cloud** email. This email will contain a link within it that, when clicked on, will direct the user to their own registration page.

If the user does not see a registration email in their inbox, have them check their SPAM filter

Completing the user registration

When the user clicks on their email, they will be directed to a sign-up form

Create Account

Username:

Password:

Confirm Password:

Register

COUNTERPOINT® Connectivity

2022. AMS Computer Group / Counterpoint
Cloud Platform.

The user will enter in their desired username and a valid password.

Counterpoint Cloud Platform does require complex passwords and will notify you if the chosen password does not meet the minimum requirements of the service.

Upon successful completion of the user setup, your user will be presented a link to log in.

Managing users

Once a user is set up in the platform, you can manage the user by going to the **CP2 Manager** tab in the left-bar navigation pane. Once in the **CP2 Manager** pane, you can select to edit the user you wish to manage. The user management screen has 4 possible panes to manage different of the user

User Profile

The screenshot shows the 'User Management' interface with the 'Profile' tab selected. The 'User Settings' section is active, displaying 'Logged in as:'. Below this are three main sections: 'Change Password', 'Change Email', and 'Change Name'. The 'Change Password' section includes fields for 'Current Password', 'New Password', and 'Confirm New Password'. A grey bar indicates 'Not Needed For Admin User' for the current password field. The 'Change Email' section has fields for 'Current Email' and 'New Email', with a note that a current password is required. The 'Change Name' section has fields for 'Current Name' and 'New Name'. A 'Submit All Changes' button is located at the bottom left.

The **Profile** tab allows you to change the following

- **Password:** A user's password can be modified here.

As an admin user, you are not required to enter in a user's current password in order to make this change

- **Name:** Change a user's name as it appears on reports, etc.
- **Email:** Change the email associated with a user's account

User Settings

The user settings tab manages server settings and default values used by the system. These changes should not be made without first reviewing the possible options with AMS to avoid causing problems with the user's account.

User Management

Profile Settings Permissions Special Actions

Warning: Your Counterpoint Cloud Platform profile heavily relies on some of the settings on this page. Before you change a value, take the time to read through the documentation and make sure you completely understand the value you are changing. It is possible to render your Cloud Platform profile inoperable. If you do render your Cloud Platform profile inoperable, there may be additional billing charges associated with restoring your access. Also note that it is possible to input an invalid value here, and break sections of your Counterpoint Cloud Platform installation. If you have any doubts, contact AMS before making any changes.

Show 10 entries

Search:

	Name	Value
+	flightdeckDefaultBranch	
+	flightdeckDefaultTime	mtdm
+	sidebarMode	full

Showing 1 to 3 of 3 entries

Previous 1 Next

The user settings tab allows you to manage 3 server values

- **flightdeckDefaultBranch:** The default branches displayed when you load the FlightDeck Dashboard. This should be a list of branch IDs separated by commas. ("01,02,04,12") or left empty to display all branches.
- **flightdeckDefaultTime:** The default time displayed when you load the FlightDeck Dashboard. Possible values: "mtdm", "ytd", "mtdy", "p30", "p60", "p90"
- **sidebarMode:** The mode to draw the sidebar in. Either full or small.

User Permissions

A user's access to store branches and the various modules available within the Counterpoint Cloud Platform are all managed within this tab

User Management

Profile Settings Permissions Special Actions

Enabled Branches

- 01 - Chilliwack
- 04 - Vedder
- 07 - Abbotsford

User Type

Manager

Page Permissions

FlightDeck

- FlightDeck Dashboard
- Inventory Dashboard
- Sales Goals

CounterCRM

- Customer Directory
- Customer Dashboard
- Notes
- Delivery History
- Call Log
- Invoice History
- CounterCRM Resources

Counter Message

- CounterMessage Core

ECat Analysis

- ECat Core

Resource Center

- Resource Center Core

CPMailer

- CPMailer Core
- CPMailer Manager

- **Enable Branches:** Here you can activate a user's access to your branch locations
- **User type:** This allows you to elevate or lower a user's global access level

- **Page Permissions:** This allows you to grant access or revoke access to specific pages within the Counterpoint Cloud Platform

Based on a user's global access level, some pages are deemed 'required' and will not be able to be revoked.

Special Actions

This tab allows for special actions to be taken on an account by an admin user

The screenshot displays the 'User Management' interface with the 'Special Actions' tab selected. The interface is divided into four tabs: Profile, Settings, Permissions, and Special Actions. The 'Special Actions' tab contains three main sections: 'User Manager', 'Archive User', and 'Imitate User'. The 'User Manager' section includes a 'Currently managed by:' field, a 'New Manager:' section with a 'Manager's Name' input field, and a 'Transfer User' button. The 'Archive User' section has an 'Archive User' button. The 'Imitate User' section has an 'Imitate User' header and a 'Login as user' button.

- **User Manager:** This assigns another user as the manager of the user selected. This will allow you to assign a 'Manager' level user control of a 'User' level user
- **Archive User:** This will essentially disable a user. It does not delete the user, as this may break certain functionality, but it renders a user inoperable and unable to log in.
- **Imitate User:** Allows you to log in as the user and see their view of the Cloud Platform

User Types

There are three different types of users, each with their own restrictions on what permissions apply to them:

User

A normal user can be limited in the modules they see, branches they can access, and are limited to their own sales in most cases.

Manager

A manager user can be limited to the modules they see and the branches they can access, however they are able to see sales data regardless of the associated sales rep.

Assigning a salesperson ID to a manager will have no effect on their ability to see information.

Admin

An admin user can not have permissions applied to them based on modules, branches, or salesreps. An admin user is granted all permissions available.

Permission Errors

You currently do not have permission to view any branches.

This message is displayed on every page when logged in as a user that does not have access to any branches. With the new permission system in Beta 1.3, every user must be granted explicit permissions as to what information they are able to use.

If you are the user seeing this message, contact your manager or whoever sent you the invite link to the Counterpoint Cloud platform and ask them to give you access to one or more branches.

If you are the manager of a user who is seeing this, navigate to the ManagerCP module and edit the user's permissions to grant them access to one or more branches in your Counterpoint Cloud instance.

Module Details

FlightDeck

FlightDeck Dashboard

Enabling the FlightDeck Dashboard gives a user access to sales either tied to their salesrep id, or all sales in the case of a manager for branches which they have permission to. Users can filter the data by time periods, branches, and specific customers.

Inventory Dashboard

Enabling the Inventory Dashboard gives a user access to all of the inventory data for all branches which they have permissions to access. This includes total inventory value, various value breakdowns, old/low stock tables, and value comparisons against company totals.

Sales Goals

Enabling the Sales Goals module allows a user to track the progress of a branch, or of their own sales performances over a period of a given month or year.

CounterCRM

Customer Directory

The Customer Directory module allows a user to lookup a customer based on their other information. With access to the Customer Dashboard module, clicking on a customer will load into their CounterCRM Dashboard.

Customer Dashboard

The Customer Dashboard breaks down sales for a given customer similar to the FlightDeck Dashboard module. In addition the Customer Dashboard module serves as a central point for seeing information from the other CounterCRM modules, CounterMessage messages, and imported data on jDispatch deliveries.

Note: Requires access to the Customer Lookup module to function properly.

Notes

The Notes module of CounterCRM imports notes assigned to a customer in COUNTERPOINT and displays them. The Notes module also allows for the creation of additional notes for a specific customer, with the ability to return a note back to COUNTERPOINT available in a future version.

Note: Requires the Customer Directory and Customer Dashboard modules to function properly.

Delivery History

The Delivery History module imports a history of deliveries made to the customer, via jDispatch.

Note: Requires the Customer Directory and Customer Dashboard modules to function properly.

Call Log

The Call Log module provides a history of calls involving the customer, imported from your AMS Unified Communications platform.

Note: Requires the Customer Directory and Customer Dashboard modules to function properly.

Invoice History

The Invoice History module provides a history of invoices tied to a customer. Also includes the ability to recall an invoice PDF file that's to integration with your COUNTERPOINT web server.

Note: Requires the Customer Directory and Customer Dashboard modules to function properly.

Counter Message

Counter Message Core

The CounterMessage module provides a quick, auditable method to send a message to an email address entered in the address book of your Counterpoint Cloud platform. Message is sent via email and offers a method for the recipient to reply to the message, automatically archiving the message and generating an alert for the user who sent it.

ECAT Analysis

ECat Core

The ECat Analysis module provides a breakdown of online sales, part lookups, and lost sales that occur through the autoecat.com website.

Note: This module does **NOT** respect branch permissions at this time. Granting access to this module grants permission for all branches.

Resource Center

Resource Center Core

The Resource Center module provides a quick way to upload files into the Counterpoint Cloud Platform either for your own use in the future, or to be made public for other users to see.

CPMailer

CPMailer Core

The CPMailer Core module allows a user to view and edit their own daily/weekly/monthly CPMailer messages based on any of the blocks available on the system.

CPMailer Manager

The CPMailer Manager module allows a user to modify the CPMailer messages of users that they are the assigned manager of. This also allows the creation and management of CPMailer Users.

Note: Requires the CPMailer Core module to function properly.

CPMailer Special

The CPMailer Special module allows a user access to enable/disable the special reports (such as monthly/weekly customer alerts) on a company-wide basis.

Report Generator

Customer Reports

The Custom Reports module allows users to create their own reports based on all of the information available in the Counterpoint Cloud Platform. this also includes the ability to save and rerun previous reports.

Note: Saved reports are available to all users who have access to this module, however the branch

restrictions of users will still apply.

Note: This module does not respect a users salesrep permissions. By granting access to this module, you are granting a user access to the sales data of all salesreps.

Prebuilt Reports

The Customer Reports module grants access to prebuilt reports added to the Counterpoint Cloud Platform to be run against your data. These reports offer unique breakdowns and perspectives into performance in ways that do not fit into other modules or formats.

CP2 Admin

Admin CP

The Admin CP module grants access to some information specific to your Counterpoint Cloud Platform, such as billing cycle and registered users.

Address Book

The Address Book module grants access to editing the address book used within the CounterMessage module.

Corporate Goals

The Corporate Goals module grants permission to create corporate goals, which are then visible to all users.

Admin Alert

The Admin Alert module grants access to the ability to modify and enable/disable the message that is displayed to all users on the first page after login.

Server Settings

The Server Settings module grants access to all of the settings that can be changed for your Counterpoint Cloud Platform.

Note: The settings in this module can have disastrous effects on the performance of the Counterpoint Cloud Platform, and restoring issues caused by carelessness in this module may have additional billing costs.

Branch Management

The Branch Management module grants permission to edit the categories and groupings of branches that all users are able to use to quickly select groups of branches throughout the Counterpoint Cloud Platform.

CP2 Manager

Manager Core

The Manager Core module grants a user access to invite new users to the Counterpoint Cloud Platform, and allows them to edit users that have been assigned to them.
