

Specials / Contracts Enhancements

Overview

Modifications have been made to the Specials/Contract screen to allow the creation of a Special or Contract based on the Discount Level assigned to parts within a category, Product Class, Product Subclass and Customer Discount Group.

Another option added to the Specials/Contracts is the inclusion of Non-Stocked products. This only applies to Specials/Contracts setup for an entire category where the part being sold is found in the Price Book. If using the Discount Level option for the Special the Non-Stocked pricing parameter on the part would need to match the Discount Level on the Special

The screenshot shows a software interface for managing Specials/Contracts. It is divided into several sections:

- Top Section:** Search and filter fields including Category, Part Number, Barcode, Description, Expanded, Substitute #, Summary #, Type, Link, Class, Sub Cl, Category Description, Link After Part Number, Display Number, Remarks, Corporate Rank, and Branch Ranking. A "Change Item" button is visible on the right.
- Middle Section:** A table with columns: Item Status, Purchasing Information, Price Level Description, GP %, and Pricing.

Item Status	Purchasing Information	Price Level Description	GP %	Pricing
18 On Hand	45 Quantity Per	62 1 1 Plv	%	
19 On Order / Committed	46 Type	63 2 2 Plv	%	
21 Customer b/o / Supplier b/o	47 Weight	64 3 3 Plv	%

Specials Maintenance

At least one of the main options must be chosen when setting up a new special, Customer, Category, Discount Level, Discount Group, Class or Sub Class or a combination of these can be selected.

Change Specials				Special Pricing Maintenance				
1	Customer		Space = All		At least one of these must have an entry		
3	Category		Space = All				
5	Part Number		Space = All				
7	Discount Level	8	Only if Blank?			(Y/N)
9	Discount Group		Space = All				
9	Class		Space = All				
12	Sub-Class		Space = All				
14	Only at Net						
15	Start Date	/	/		
18	End Date	/	/		
21	Net Price						
22	Price Level						
23	Percentage						
24	Price Break						
25	Inc. Non Stocked?	(Y/N)					
26	To Be Sold		(0 =No Limit)				
27	Sold		(Updated By System)				
28	Flyer		(Promotion Number)				

Customer

If left blank the special will apply to all customers and if you wish to use a specific customer they will need to be setup to “Allow Contract Pricing = Y” in the Customer Maintenance screen. Depending on the Billing Parameter setting “Contract Only” found on screen 3 a Contract setup for a specific customer will always sell at the Contract price if set to Y and will sell at the lowest available price based on Discounts and Specials for the product if set to N.

The Billing Parameter Maintenance is found under **Utilities > System Setup > Sales Desk > Parts Billing Parameters.**

Category – Part Number

A Special/Contract can be setup for a specific Category/Part Number or an entire Category by just entering the Category and leaving the Part Number blank. If setup for an entire Category then the pricing will be entered as a Price Level and Discount (+/-).

Discount Level

The use of Discount Level for a Special or Contract requires that the Special/Contract be setup for an entire Category or All Categories. When adding a Special/Contract for an entire Category it also requires that you identify if the Special/Contract is to only affect parts with a blank Discount Level or if it is to be all parts. If a specific Discount Level is assigned to the Special/Contract the Only if Blank will be automatically filled in.

Discount Group

Specials setup for a Discount Group will apply to all customers assigned to that discount group regardless of the “Allow Contract Pricing” setting on the customer.

Class/Subclass

The Special/Contract will apply to all part numbers contained in the Class or Class and Subclass. The pricing will be by Price Level and Discount (+/-).

Only at Net

When this is set to “N” [Net Only] the Special will apply to All Customers as the net price. This will override the customers regular discounts but if the Billing Parameters are set for “Contract Only” = Y then an existing Contract price will take precedence.

Start – End Dates

This is the time frame the Special/Contract will run for, inclusive of the start and end dates. If a To Be Sold quantity is used then the Special/Contract will be in effect until the available quantity is sold or the end date is reached, whichever occurs first.

Price

If the Special/Contract is for a specific part number then a Unit Price can be entered otherwise the price will be based on a Price Level and Discount (+/-)

Price Break

The Quantity Price Breaks option has been updated to allow Quantity Breaks for individual customers or discount groups as well as all customers. The dates may be used to limit the time this price break is offered. The net price is left blank and “0” (zero) is used for the price level with a blank percentage value when adding a Price Break Special. The Price Break code is entered into the special, the Tab key can be used to search the codes setup in the system. Only S type Price Break codes can be used in the Specials.

Within the Billing Parameters the system must be set to not show line discounts in order to take advantage of Quantity Price Breaks. This setting, **D% on screen YNDS** is found on screen 3 of the Billing Parameter Maintenance and must be an **N** as shown in the parameter screen above.

Include Non-Stocked

Specials/Contracts setup for an entire category or discount level can be applied to Non-Stocked parts included in the price book.

To Be Sold

This will limit the Special/Contract to the number of units entered. When the quantity sold exceeds the "To be Sold" value the price will revert back to the normal price.

Quantity Sold

This value is updated automatically as sales take place

Flyer

This is a reference description used for reporting.
